Bond Yields & Curves

Yield Levels

German & US benchmark bonds on-the-run Nordea Analytics benchmarks.

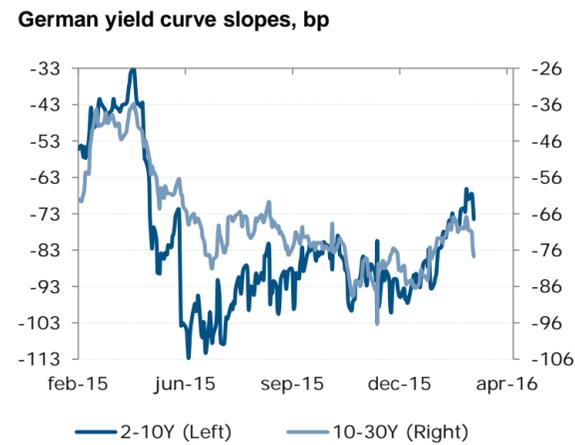

USA-Germany spreads, annualized yields, %

Bond Curve Shape

German curve slopes are yield spreads between Nordea Analytics benchmark bonds.

Bonds vs. equities

Swaps and Forwards

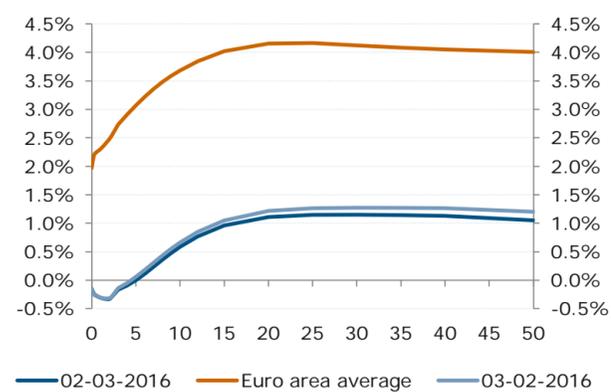

EUR swap rates and implied forwards, %

EUR-USD spreads and implied forwards, %

EUR swap curve shape vs. historical

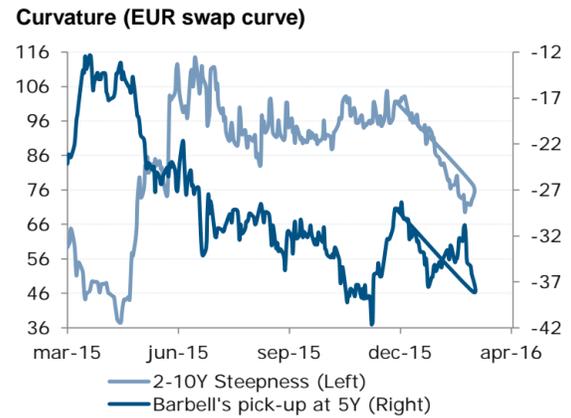

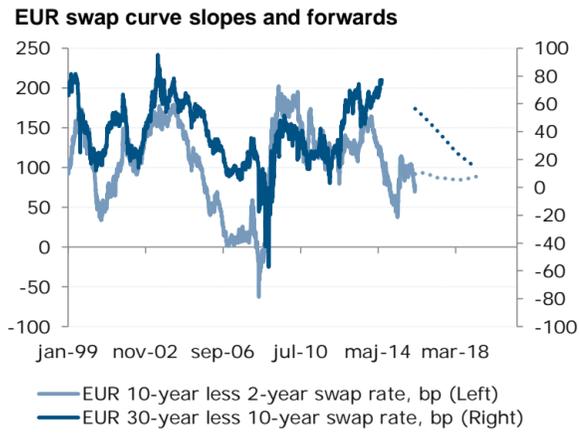

Historical forward rates, %

E.g. 2Y2Y swap rate illustrates the rate of a 2-year swap with a 2-year forward start.

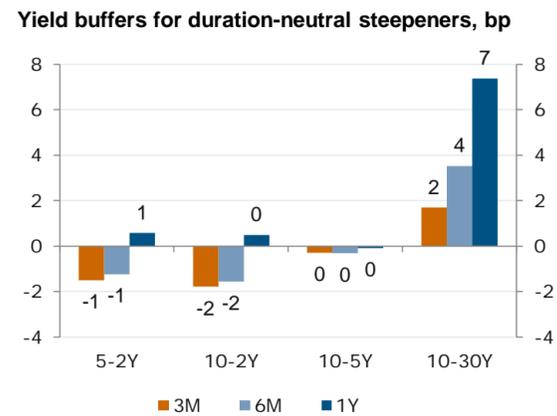

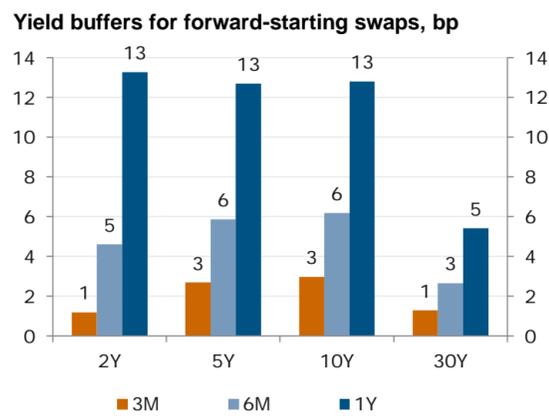

5Y pick-up over a duration and cash neutral 2-10Y EUR swap barbell.

Carry

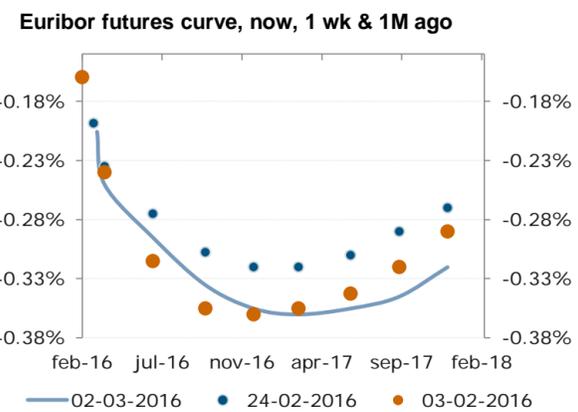

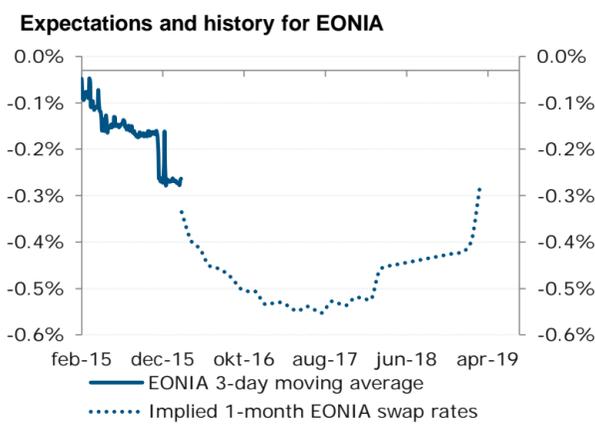

The carry on the given horizon illustrates how much the spot swap rate may rise for a receiver swap position in a forward-starting swap to result in zero profit.

Yield buffers for steepeners tell how much the curve may flatten in order to result in a zero-profit in a forward starting steepener position.

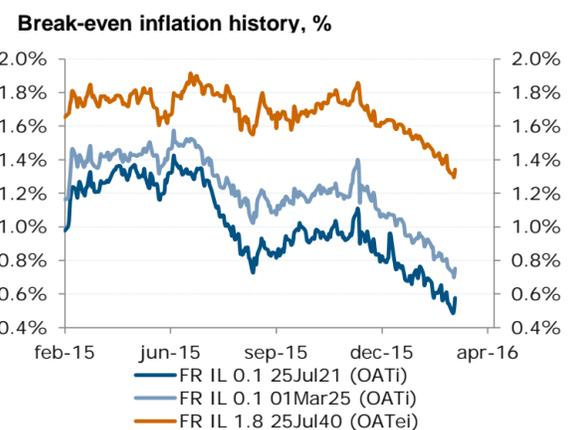

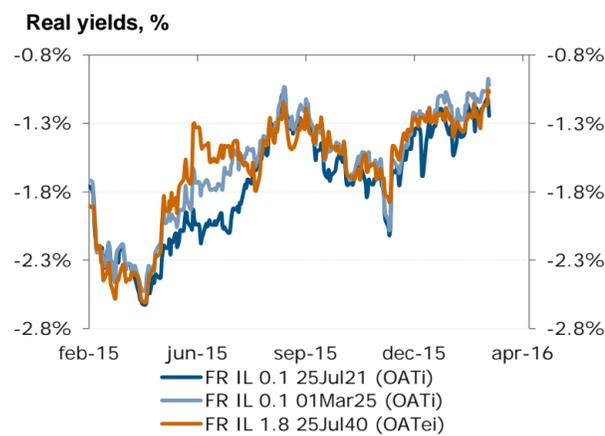

Money Market Rates

The EONIA (Euro Overnight Index - Average) rate is the effective overnight reference rate for the euro.

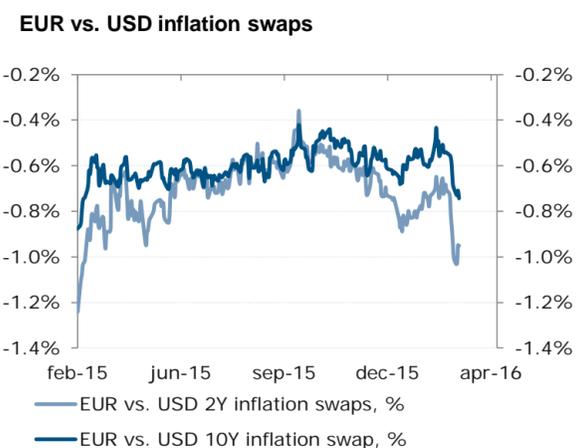

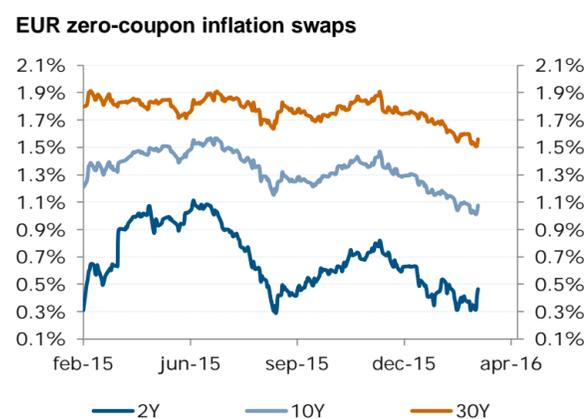

Inflation-linked Bonds

Break-even inflation calculated as a yield spread to a nominal comparable bond.

Inflation Swaps

A zero-coupon inflation swap is a derivative contract, in which one party pays a fixed rate (the break-even inflation rate) and the other party pays a floating rate based on realized inflation. The zero-coupon inflation swap illustrates the average expected inflation rate during the life of the swap.

Credit & Money Market Spreads

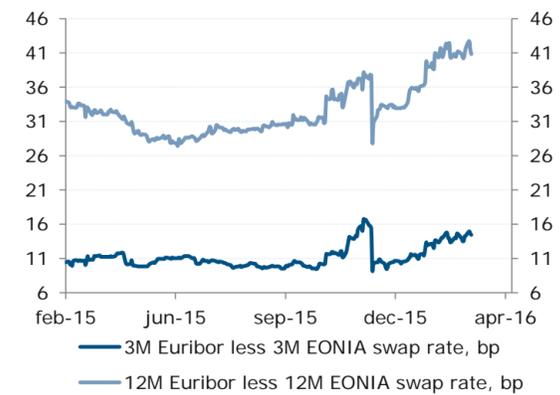

Credit default swap indices illustrate the annual cost of buying protection against a credit event of a company. iTraxx® Europe is comprised of the 125 most liquid CDS contracts referencing European investment grade credits, iTraxx® Crossover of 50 sub-investment grade credits.

The spread between Euribor and EONIA swap rate illustrates the money market credit risk premium, i.e. the difference between Euribor rates and the expected future ECB minimum bid rate.

iTraxx® credit default swap spreads

Money market rates vs. EONIA swap rates

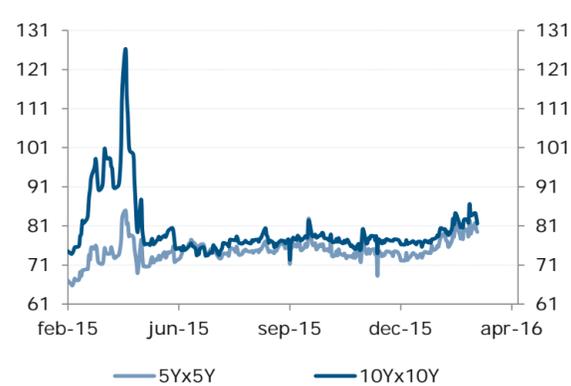

Swaption Volatilities

ATMF (At The Money Forward) swaption bp vol measures the normalized volatility, i.e. the absolute changes in the forward rate in basis points.

Short-dated ATMF swaption bp vol

Long-dated ATMF swaption bp vol

Swap & Cross-country Spreads

Swap spread: Benchmark bond's spread to EUR swap curve.

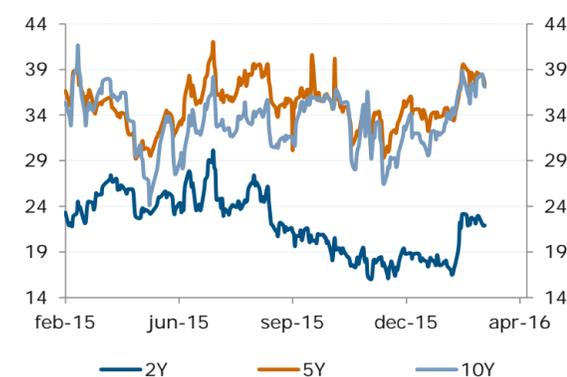

10Y country spreads are maturity interpolated spreads against the German government curve.

1Y break-even spread changes indicate how much a bond's spread against an equivalent bond trading on the German curve may widen in order to give the same return in one year.

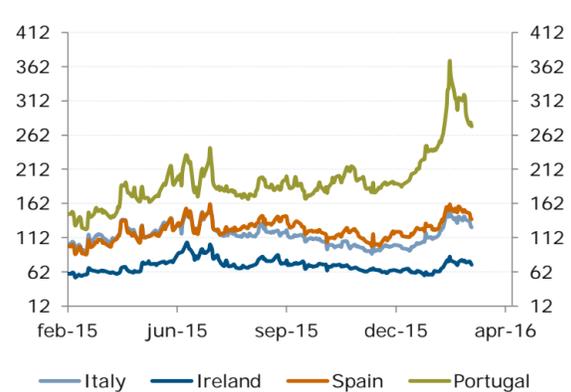

The break-even spread change is based on the spread against the following two German benchmark bonds:

DE TB 16Mar18
DE 0.5 15Feb26

German swap spreads, bp

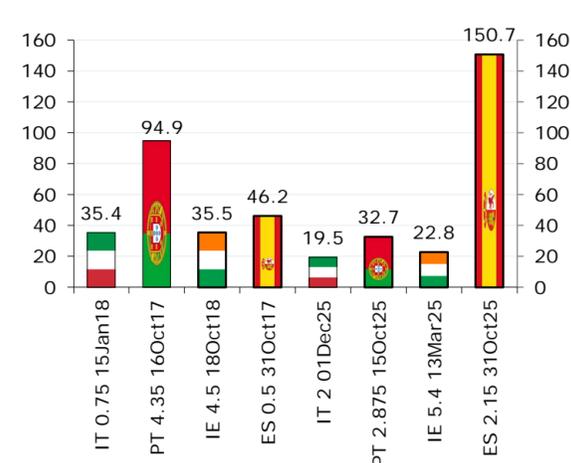

10Y non-AAA spreads against Germany, bp

10Y AAA/AA+ spreads to Germany, bp

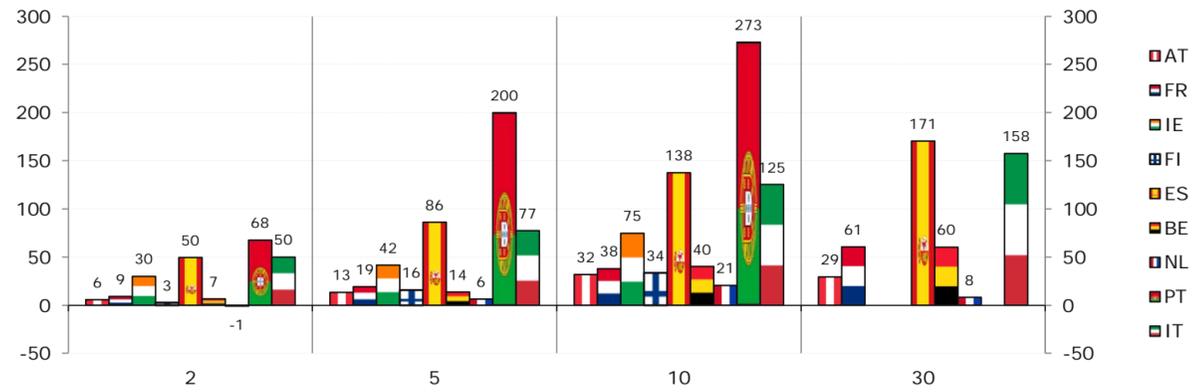

1Y B/E spread changes against Germany, bp

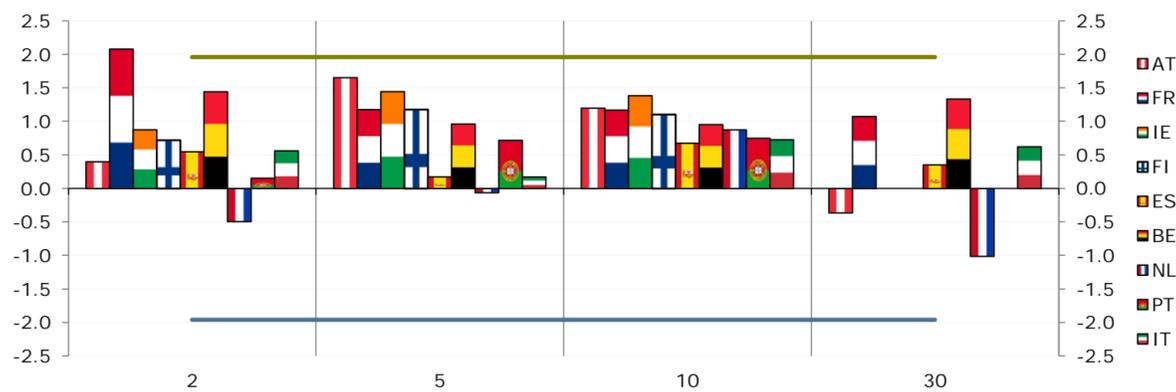

Country Relative Value

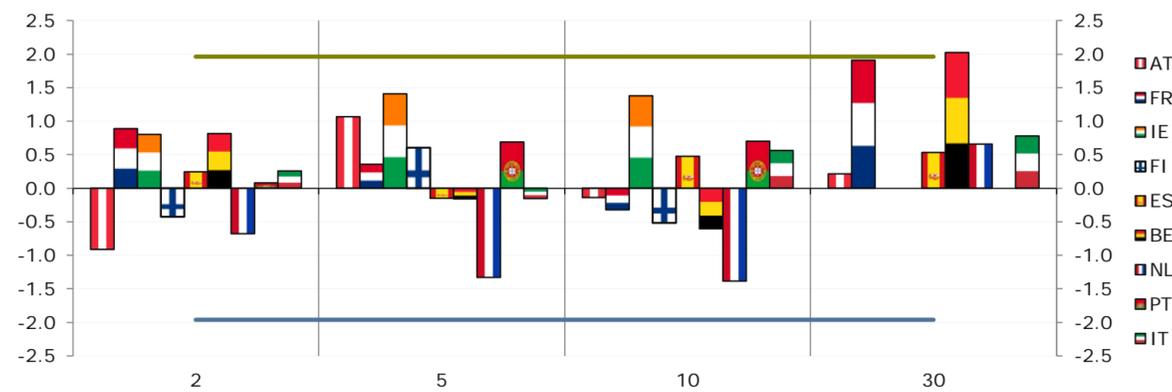

Benchmark spreads over the maturity-interpolated German par curve, bp

Z-scores of benchmark vs. Germany

Z-scores of benchmark vs. swap curve

To exploit the historical cheapness/ richness of bonds, we calculate 60-day z-scores:

$$\frac{\text{Current spread} - 60\text{-day average}}{\text{standard deviation}}$$

- Bond is
- rich if z-score < -1.96
 - cheap if z-score > 1.96

The richest and cheapest benchmark bonds against Germany and the swap curve by sectors:

	Against German Curve					Against Swap Curve				
	Issue	Maturity	Coupon	Spread	Z-score	Issue	Maturity	Coupon	Spread	Z-score
