Bond Yields & Curves

Yield Levels

German & US benchmark bonds on-the-run Nordea Analytics benchmarks.

German benchmark bond yields, %

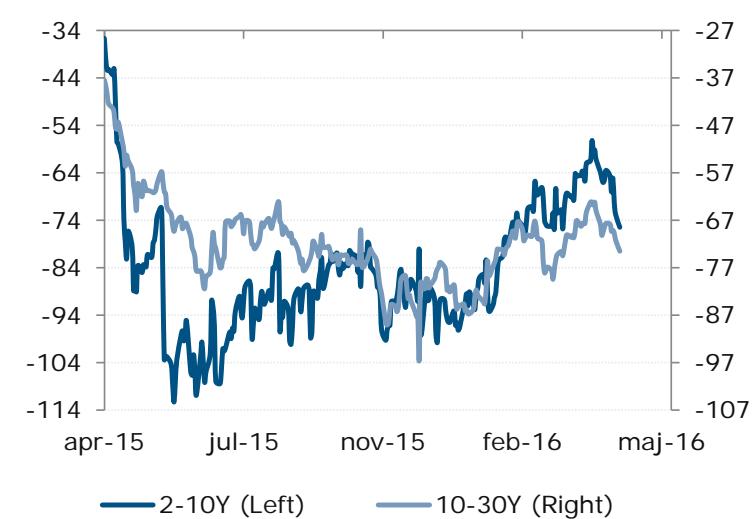

USA-Germany spreads, annualized yields, %

Bond Curve Shape

German curve slopes are yield spreads between Nordea Analytics benchmark bonds.

German yield curve slopes, bp

Bonds vs. equities

Swaps and Forwards

EUR swap rates and implied forwards, %

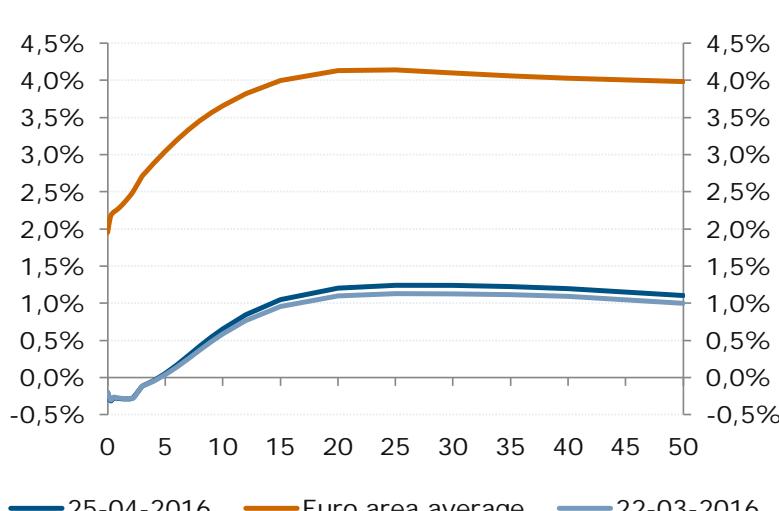

EUR-USD spreads and implied forwards, %

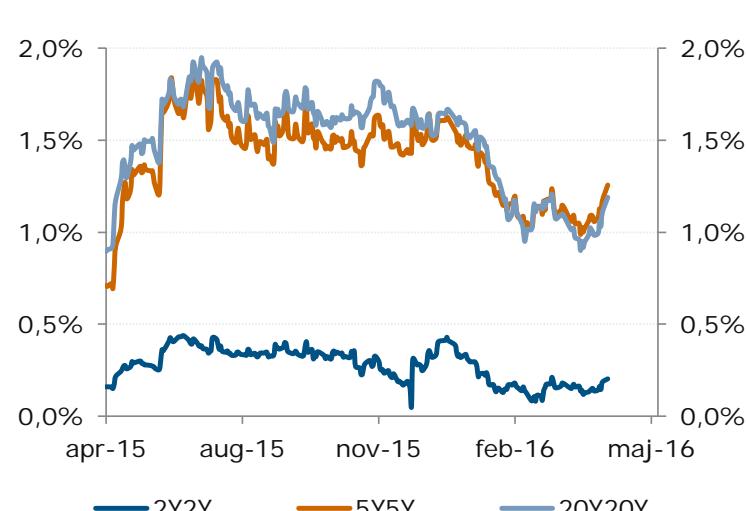

EUR swap curve shape vs. historical

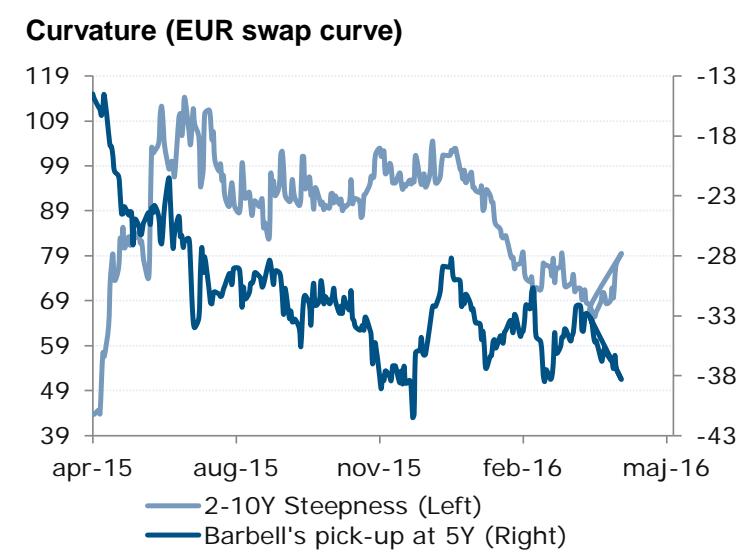

E.g. 2Y2Y swap rate illustrates the rate of a 2-year swap with a 2-year forward start.

Historical forward rates, %

5Y pick-up over a duration and cash neutral 2-10Y EUR swap barbell.

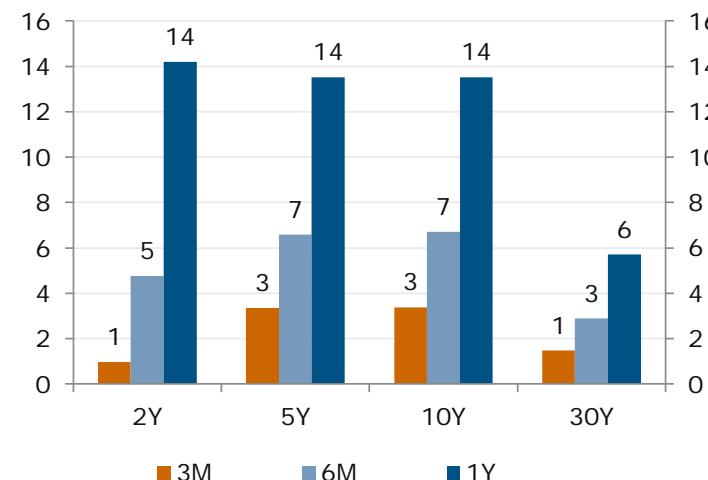

Carry

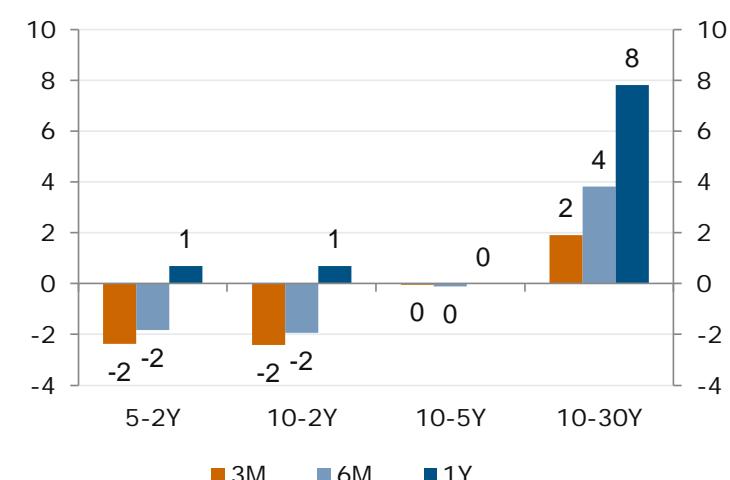

The carry on the given horizon illustrates how much the spot swap rate may rise for a receiver swap position in a forward-starting swap to result in zero profit.

Yield buffers for steepeners tell how much the curve may flatten in order to result in a zero-profit in a forward starting steepener position.

Yield buffers for forward-starting swaps, bp

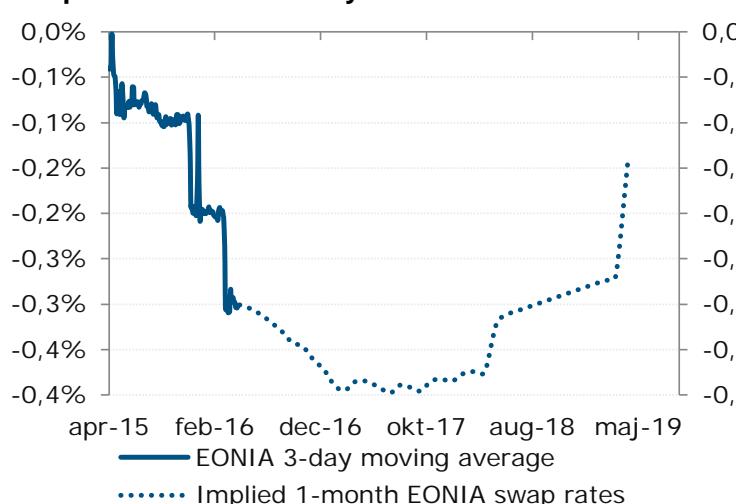

Yield buffers for duration-neutral steepeners, bp

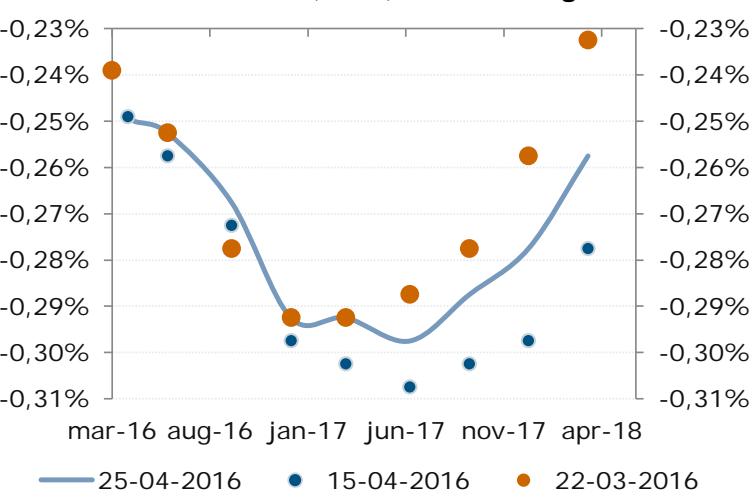

Money Market Rates

The EONIA (Euro Overnight Index - Average) rate is the effective overnight reference rate for the euro.

Expectations and history for EONIA

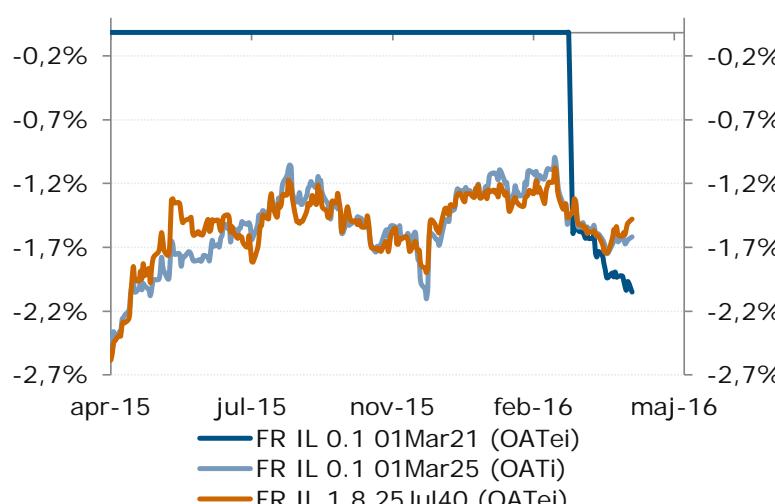

Euribor futures curve, now, 1 wk & 1M ago

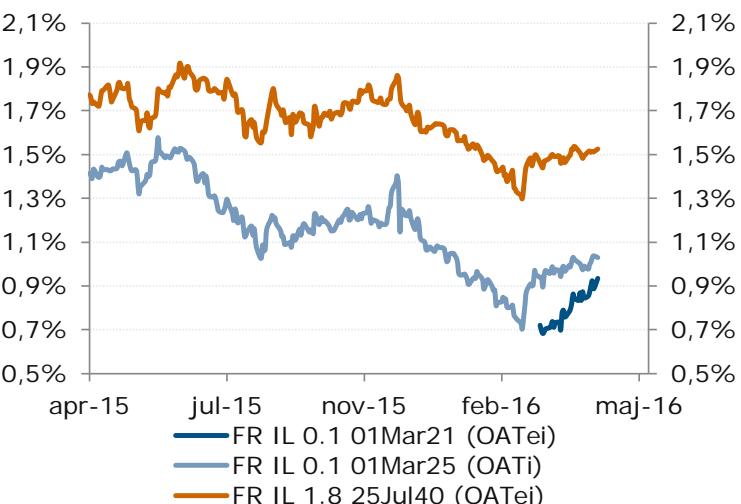

Inflation-linked Bonds

Break-even inflation calculated as a yield spread to a nominal comparable bond.

Real yields, %

Break-even inflation history, %

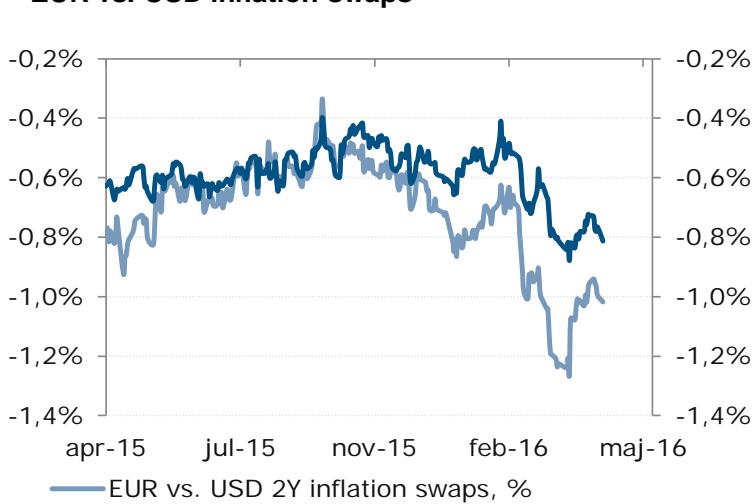

Inflation Swaps

A zero-coupon inflation swap is a derivative contract, in which one party pays a fixed rate (the break-even inflation rate) and the other party pays a floating rate based on realized inflation. The zero-coupon inflation swap illustrates the average expected inflation rate during the life of the swap.

EUR zero-coupon inflation swaps

EUR vs. USD inflation swaps

Credit & Money Market Spreads

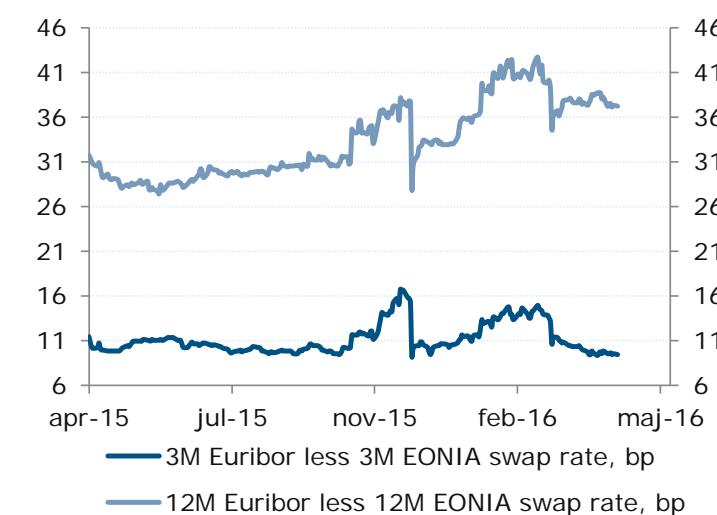

Credit default swap indices illustrate the annual cost of buying protection against a credit event of a company. iTraxx® Europe is comprised of the 125 most liquid CDS contracts referencing European investment grade credits, iTraxx® Crossover of 50 sub-investment grade credits.

The spread between Euribor and EONIA swap rate illustrates the money market credit risk premium, i.e. the difference between Euribor rates and the expected future ECB minimum bid rate.

iTraxx® credit default swap spreads

Money market rates vs. EONIA swap rates

Swaption Volatilities

ATMF (At The Money Forward) swaption bp vol measures the normalized volatility, i.e. the absolute changes in the forward rate in basis points.

Short-dated ATMF swaption bp vol

Long-dated ATMF swaption bp vol

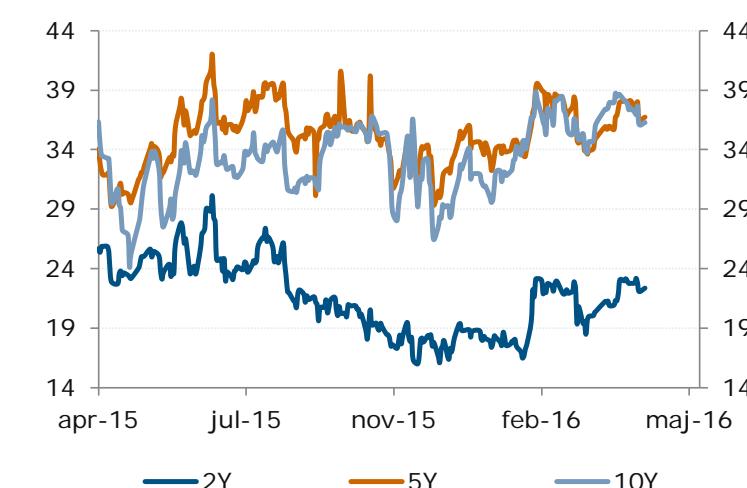

Swap & Cross-country Spreads

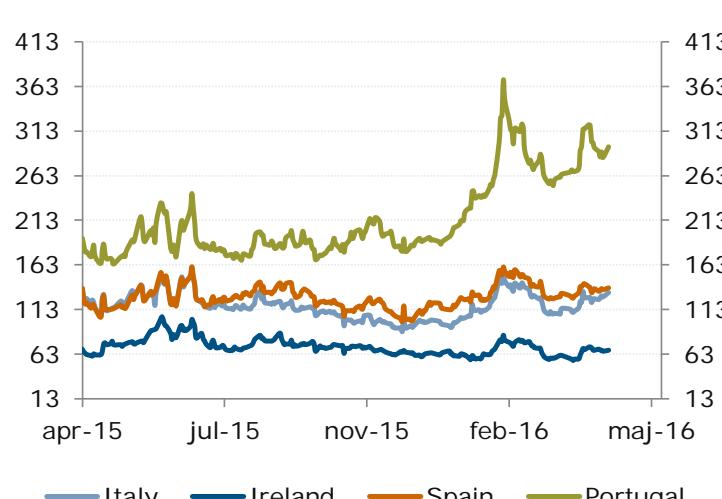

Swap spread:
Benchmark bond's spread to
EUR swap curve.

10Y country spreads are maturity
interpolated spreads against the
German government curve.

German swap spreads, bp

10Y non-AAA spreads against Germany, bp

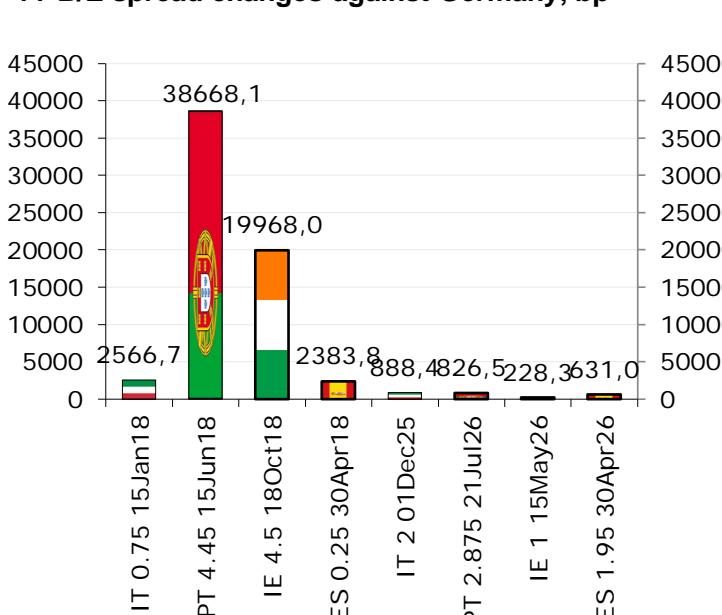

1Y break-even spread changes indicate how much a bond's spread against an equivalent bond trading on the German curve may widen in order to give the same return in one year.

The break-even spread change is based on the spread against the following two German benchmark bonds:
DE TB 16Mar18
DE 0.5 15Feb26

10Y AAA/AA+ spreads to Germany, bp

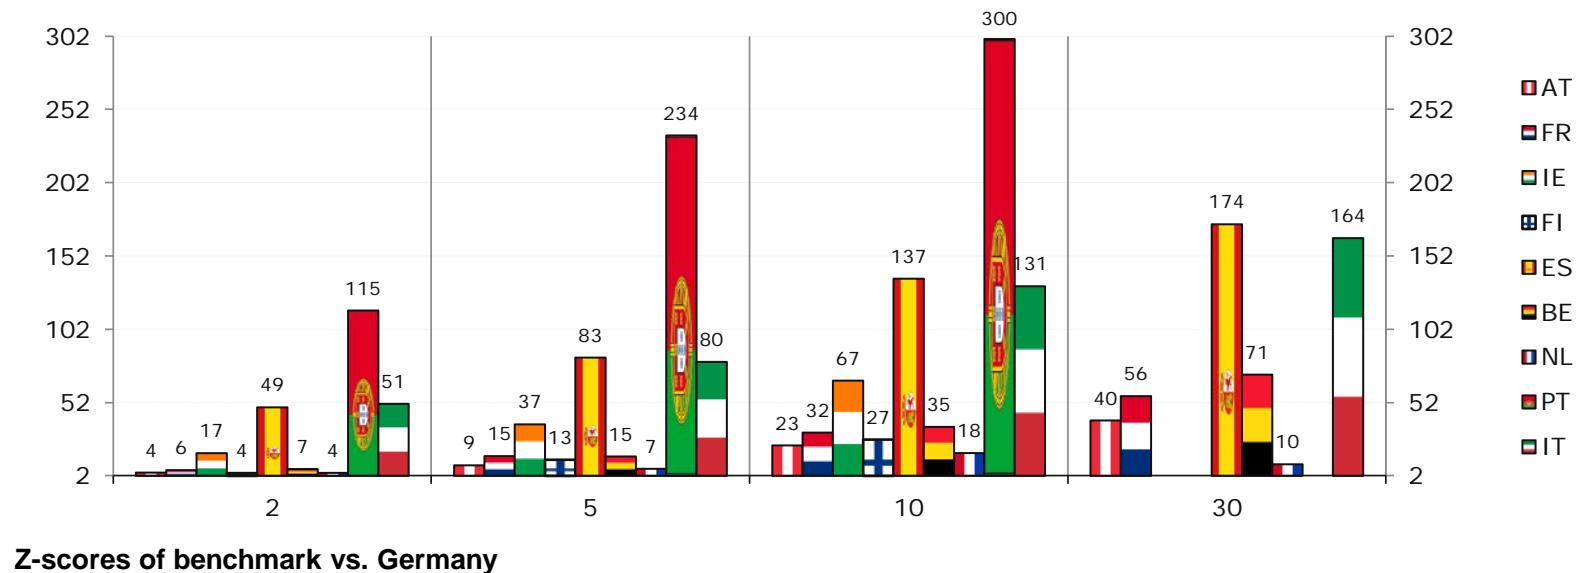

1Y B/E spread changes against Germany, bp

Country Relative Value

Benchmark spreads over the maturity-interpolated German par curve, bp

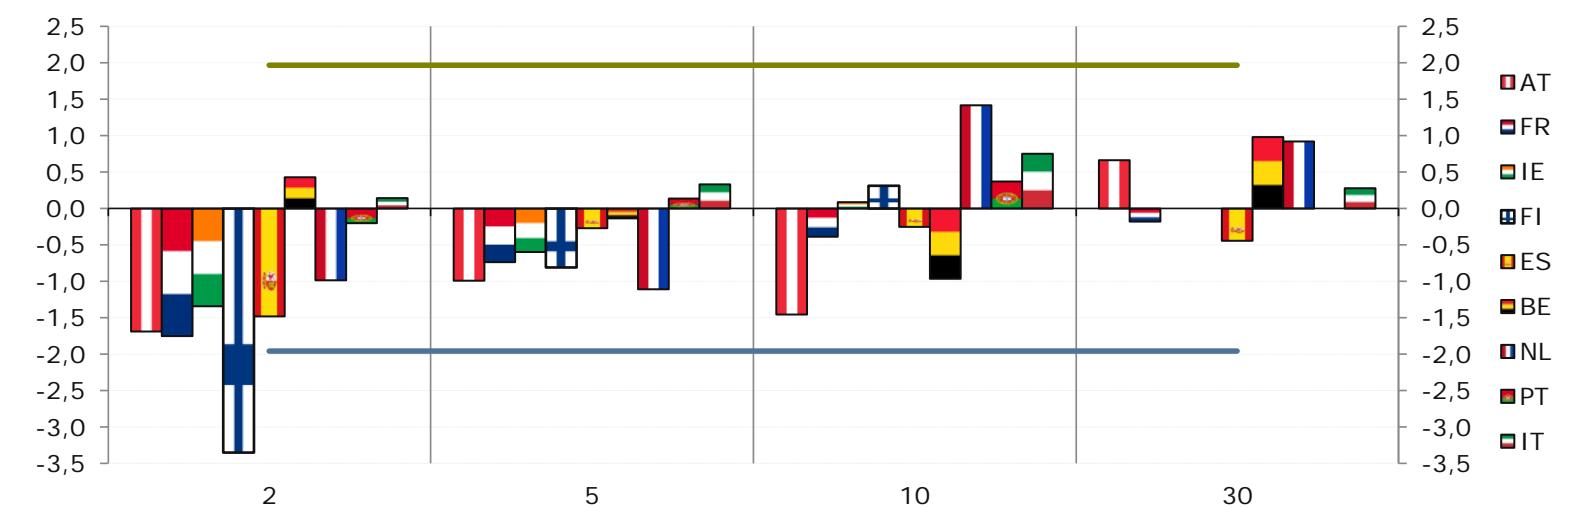

Z-scores of benchmark vs. Germany

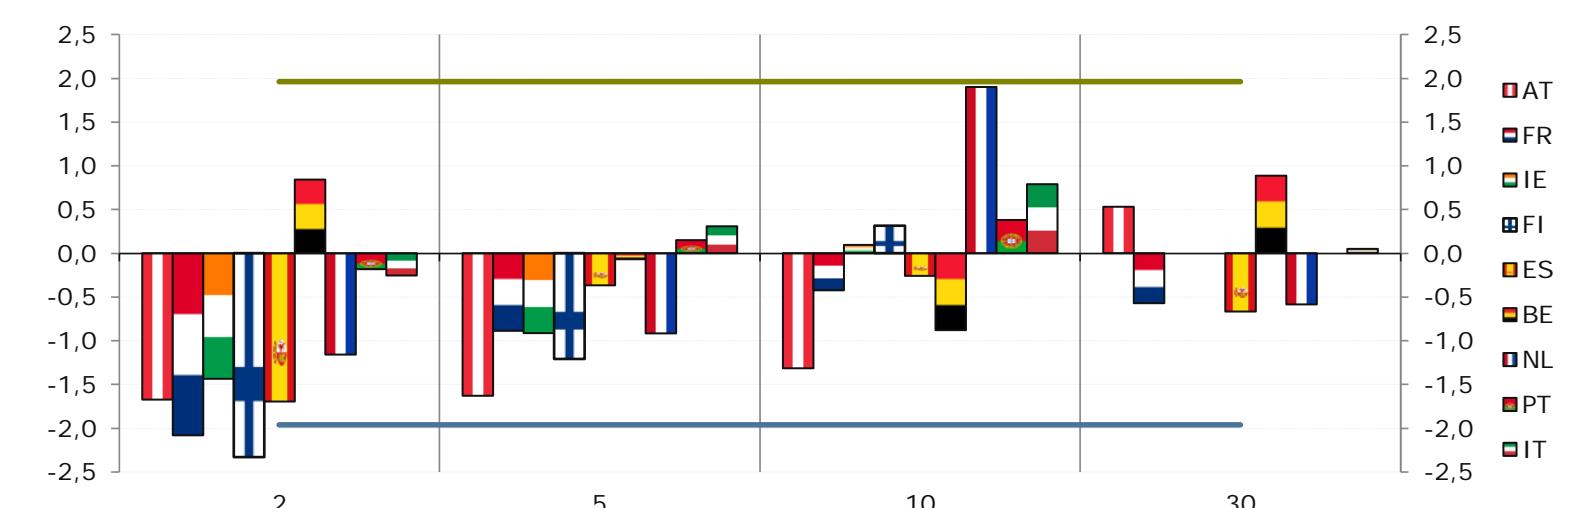

To exploit the historical cheapness/richness of bonds, we calculate 60-day z-scores:

Current spread - 60-day average standard deviation

Bond is
- rich if z-score < -1.96
- cheap if z-score > 1.96

Z-scores of benchmark vs. swap curve

The richest and cheapest benchmark bonds against Germany and the swap curve by sectors:

	Against German Curve					Against Swap Curve
